Brushography: infill styles

The same test shapes planned by paint.py in every INFILL_STYLE (settings.py), all strokes in black. Brush from the last probe: 1.6 mm at the touch, up to 3.8 mm at 3.0 mm deep. The following pages show each style with its strokes in colour, on the test shapes and on examples/example_57.png. Made 2026-11-07.

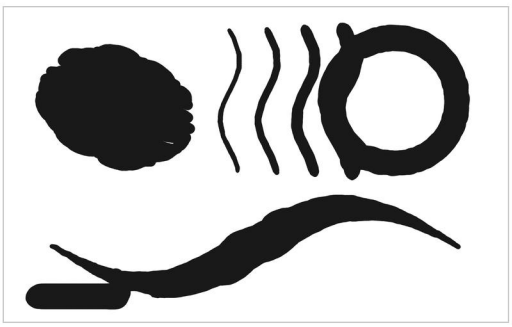

skeleton

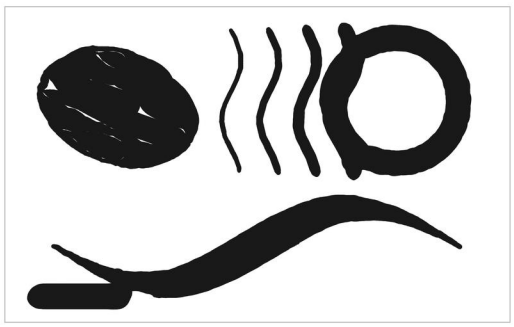

leaf

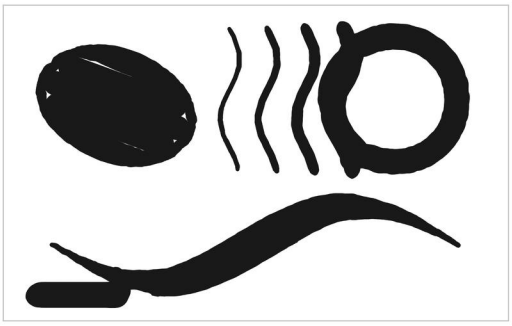

voronoi

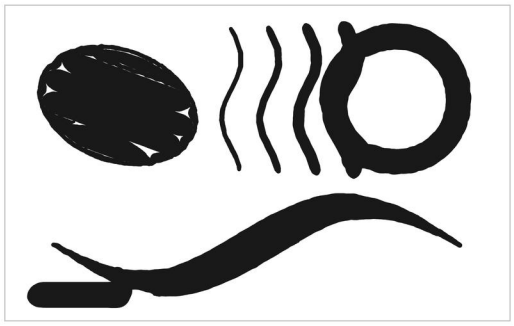

cells

wide

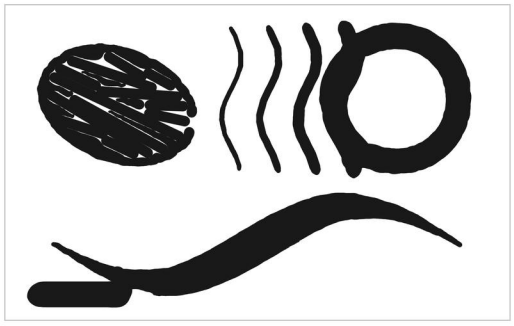

bands

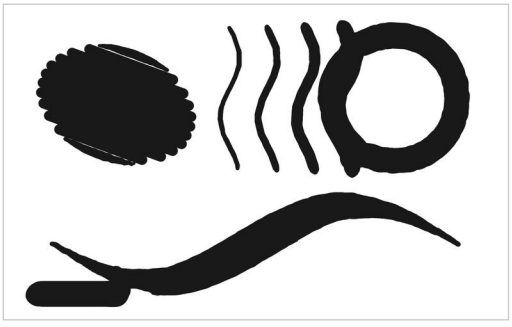

field

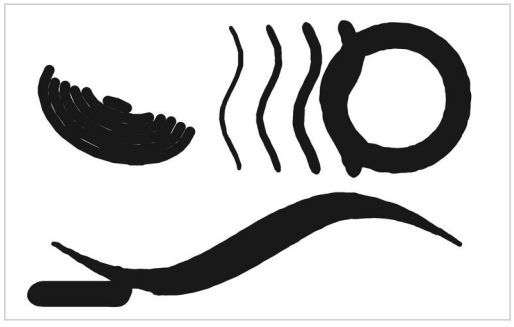

painterly

lines

lines + rings

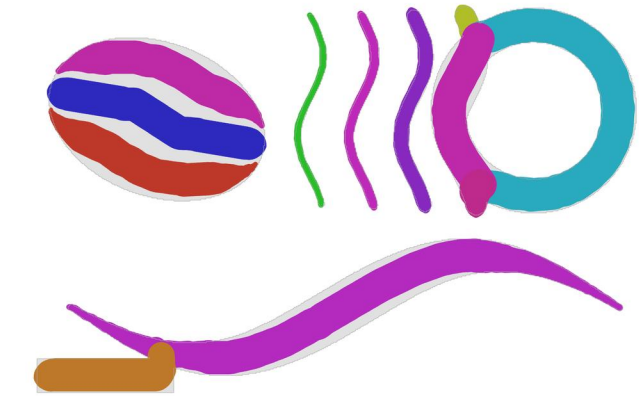

INFILL_STYLE = "skeleton"

Every shape = centre-line strokes. Depth follows the width (probe curve, at most LINE_DEPTH); wider shapes get side strokes the same way. The current default.

test shapes: 12 strokes, planned in 0.1 s

each stroke in its own colour

all strokes in black (about as painted)

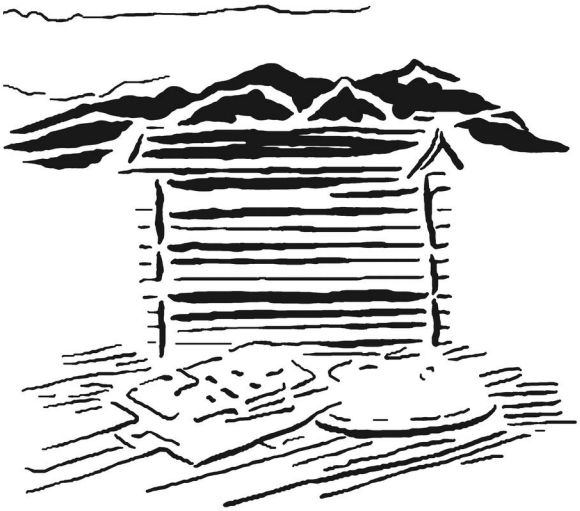

example_57: 137 strokes, planned in 0.4 s

each stroke in its own colour

all strokes in black (about as painted)

INFILL_STYLE = "leaf"

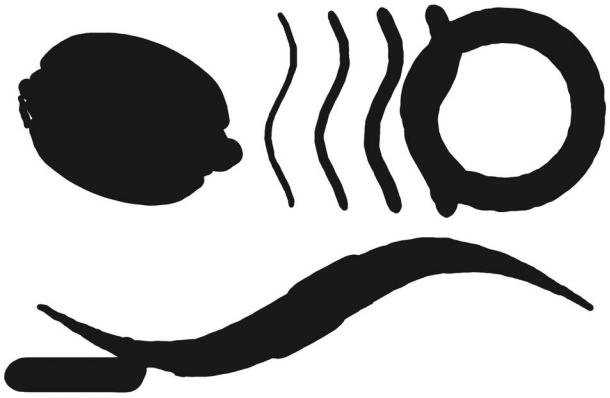

Every shape is split into leaf-shaped Voronoi cells that follow its form; each leaf is painted with a vein stroke, biggest leaves first.

test shapes: 25 strokes, planned in 0.3 s

each stroke in its own colour

all strokes in black (about as painted)

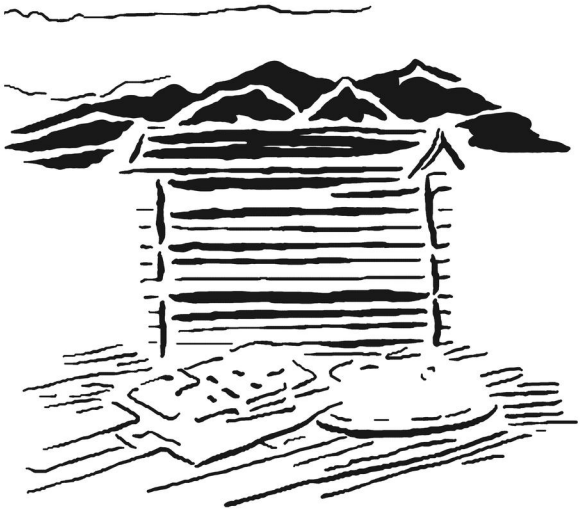

example_57: 138 strokes, planned in 0.5 s

each stroke in its own colour

all strokes in black (about as painted)

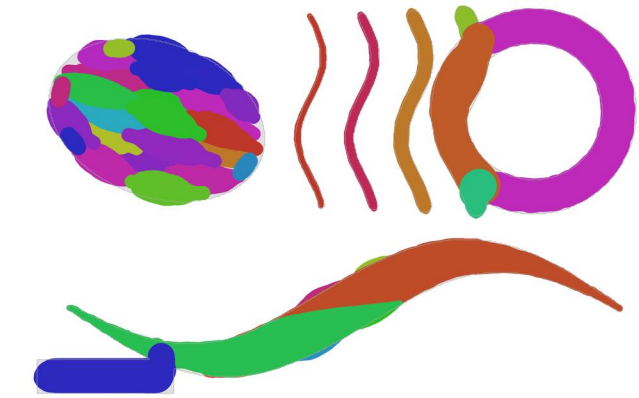

INFILL_STYLE = "voronoi"

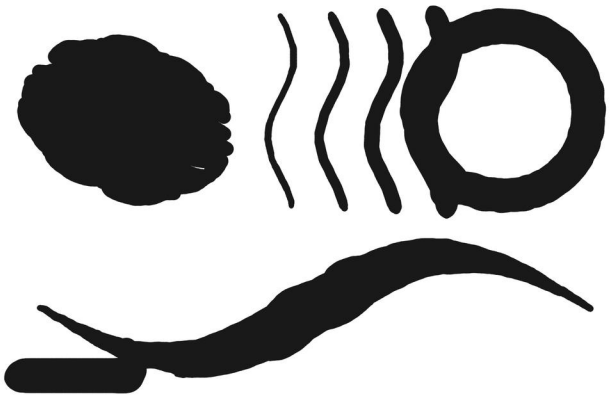

Calligraphic Voronoi cells: one thin-thick-thin stroke per cell, one hand direction, biggest blobs first.

test shapes: 39 strokes, planned in 0.4 s

each stroke in its own colour

all strokes in black (about as painted)

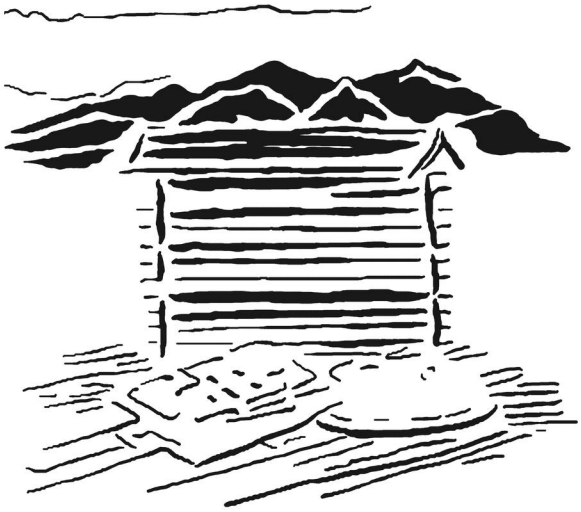

example_57: 146 strokes, planned in 0.4 s

each stroke in its own colour

all strokes in black (about as painted)

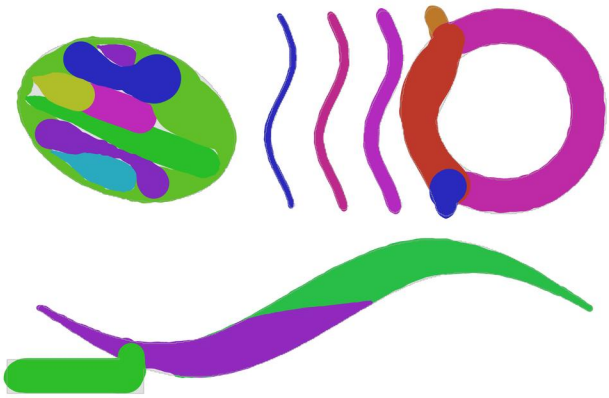

INFILL_STYLE = "cells"

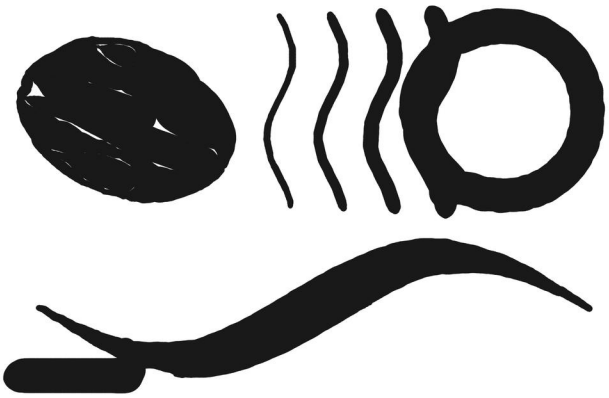

Blobs: strokes laid cell by cell, following the shape.

test shapes: 19 strokes, planned in 0.1 s

each stroke in its own colour

all strokes in black (about as painted)

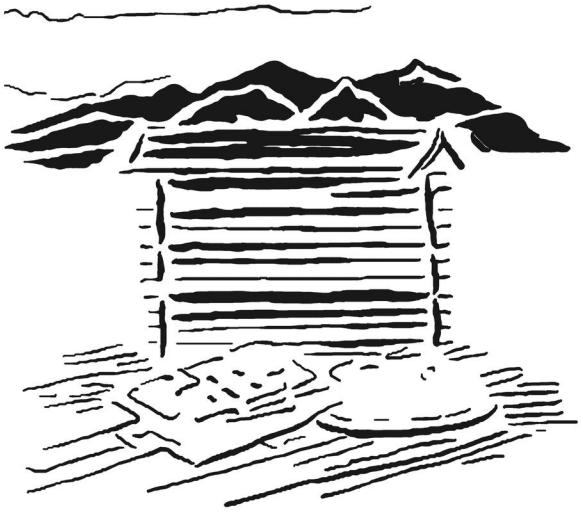

example_57: 136 strokes, planned in 0.4 s

each stroke in its own colour

all strokes in black (about as painted)

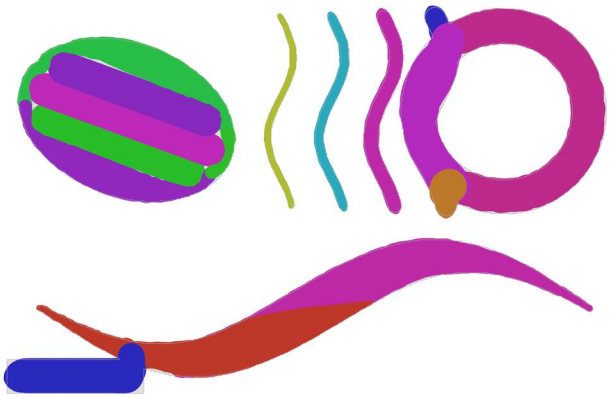

INFILL_STYLE = "wide"

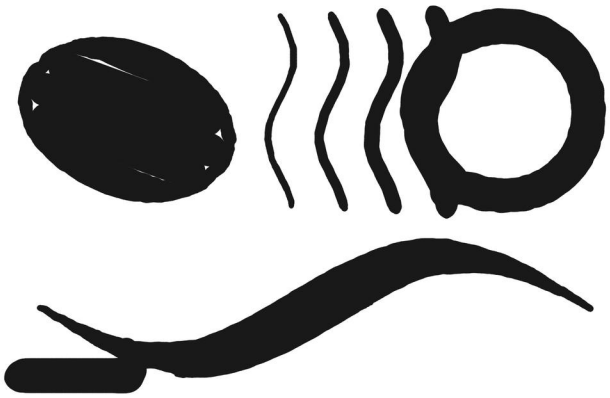

Fixed-width strokes, as wide as the brush can make, one width apart along the piece's main axis. Fast.

test shapes: 16 strokes, planned in 0.1 s

each stroke in its own colour

all strokes in black (about as painted)

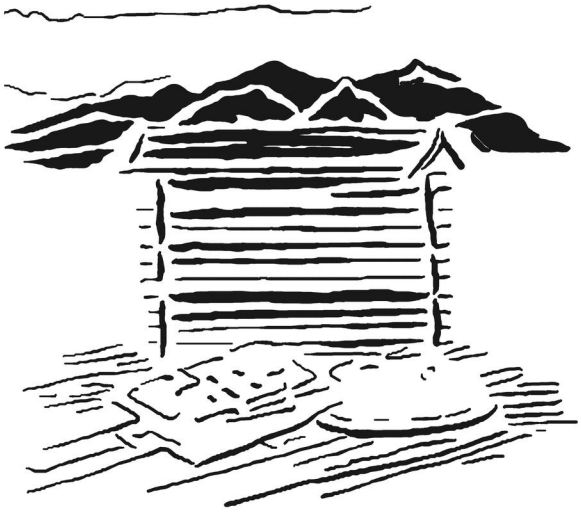

example_57: 139 strokes, planned in 0.4 s

each stroke in its own colour

all strokes in black (about as painted)

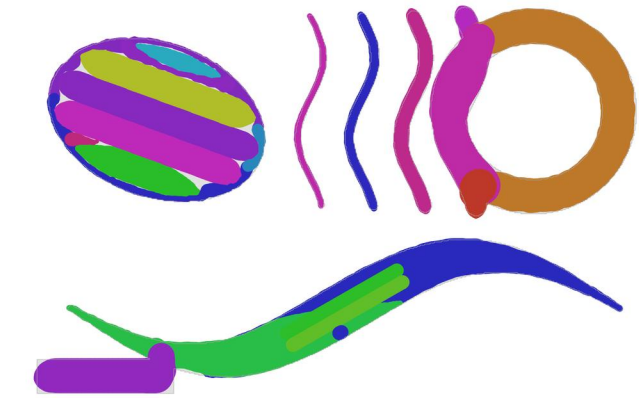

INFILL_STYLE = "bands"

Parallel strokes along each piece's own direction; the width follows the shape.

test shapes: 23 strokes, planned in 0.1 s

each stroke in its own colour

all strokes in black (about as painted)

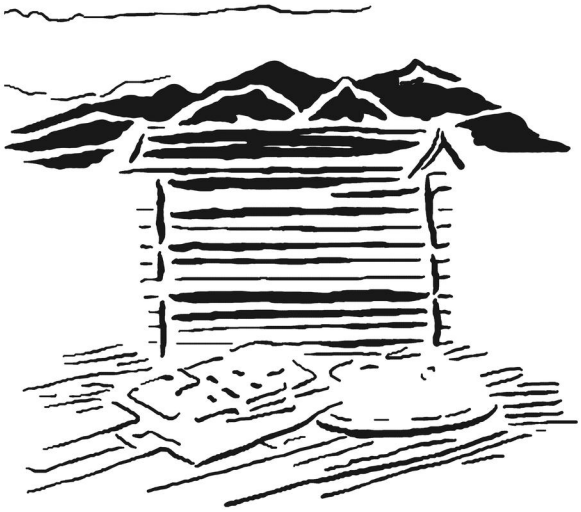

example_57: 143 strokes, planned in 0.4 s

each stroke in its own colour

all strokes in black (about as painted)

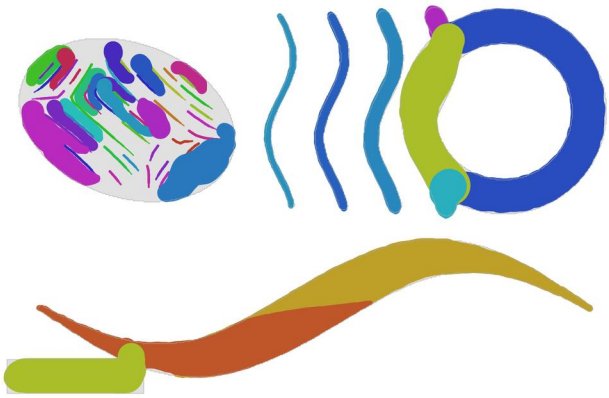

INFILL_STYLE = "field"

Strokes traced along the edge direction (experimental, short strokes).

test shapes: 66 strokes, planned in 0.2 s

each stroke in its own colour

all strokes in black (about as painted)

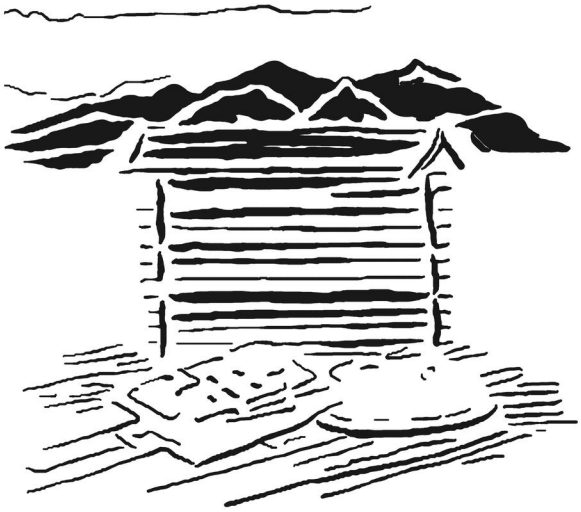

example_57: 138 strokes, planned in 0.4 s

each stroke in its own colour

all strokes in black (about as painted)

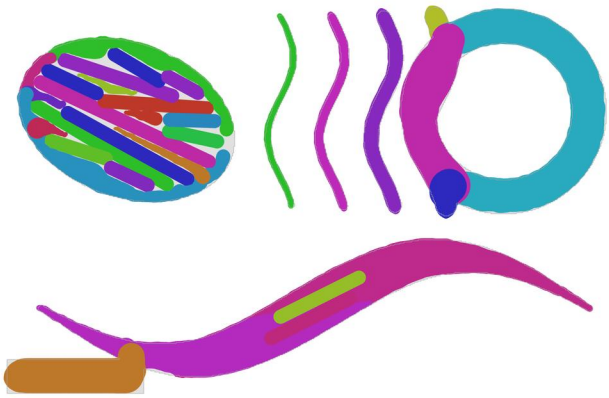

INFILL_STYLE = "painterly"

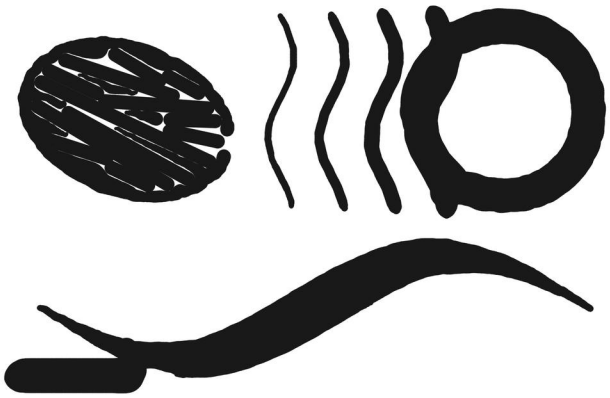

Older broken-stroke fill (experimental).

test shapes: 32 strokes, planned in 0.2 s

each stroke in its own colour

all strokes in black (about as painted)

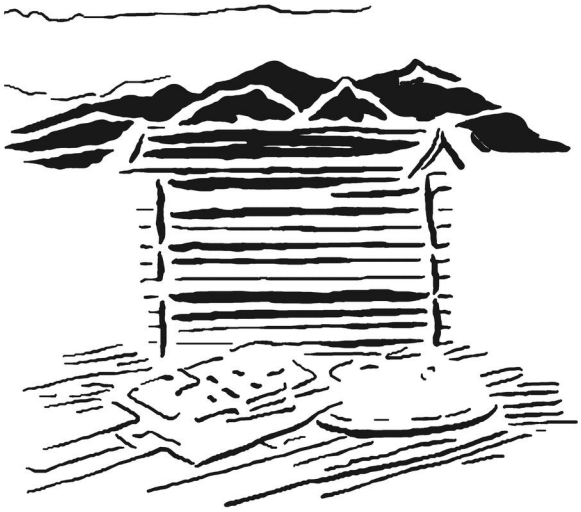

example_57: 140 strokes, planned in 0.4 s

each stroke in its own colour

all strokes in black (about as painted)

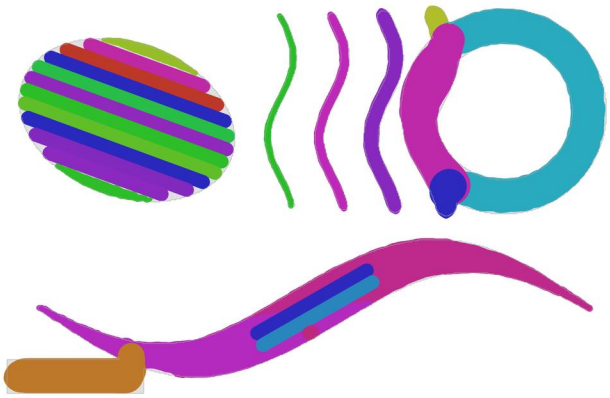

INFILL_STYLE = "lines"

Plain parallel lines (anything unknown falls back to this). Thin parts are still centre-line strokes.

test shapes: 25 strokes, planned in 0.1 s

each stroke in its own colour

all strokes in black (about as painted)

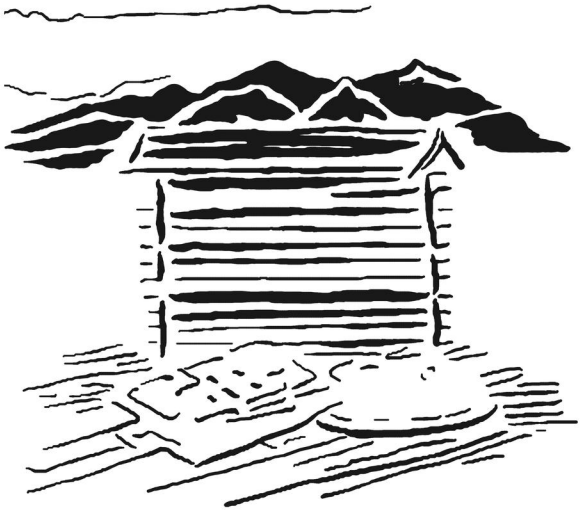

example_57: 143 strokes, planned in 0.4 s

each stroke in its own colour

all strokes in black (about as painted)

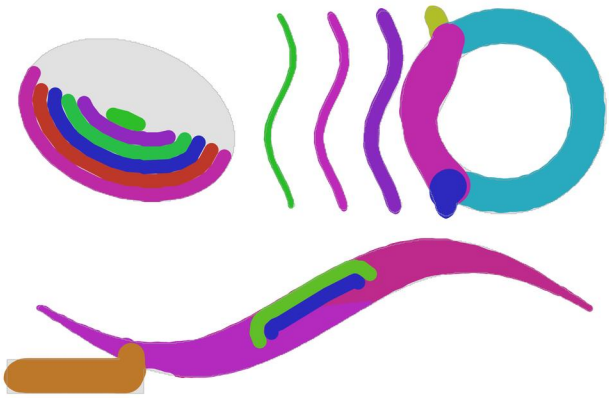

INFILL_STYLE = "lines" + INFILL_TYPE = "rings"

The 'lines' style with INFILL_TYPE = "rings": wide shapes filled with rings that follow the outline.

test shapes: 18 strokes, planned in 0.1 s

each stroke in its own colour

all strokes in black (about as painted)

example_57: 139 strokes, planned in 0.4 s

each stroke in its own colour

all strokes in black (about as painted)
